WebR

This `WebR` website is created using Quarto. It is a collection of R snippets useful for my study of R.

The website is designed to maximize quick access to frequently asked materials. It is not a tutorial, more like a quick reference.

The main chapters for this website are grouped by topics:

1. Datatypes
2. DataFrames
3. Datasets
4. ggPlots
5. Tables
6. Examples
7. References

Others may be added later. The R used in this website tends to lean towards `tidyverse`.
